

Mobile Civic Laboratories & The Pedagogy of the Journey

Mission Possible: Sicily by Train

A collaborative educational journey
organized by Jugendarbeit Regio Kerzers,
Education in Progress (Messina), and
supported by Movetia. Trip via Milano and
Naples.

Dates: October 18th - 25th, 2025

How It Works: The "Kinetic Hub"

- Physical Kinetic Space: A converted bus travels to isolated village squares, acting as a mobile youth center to break institutional hierarchies.

SciaraProgetti

- Transit Geography: Using trains as moving classrooms (e.g., Switzerland-Sicily routes) featuring the gamification method "Community Building: Brick by Brick" (building ideal youth spaces with blocks)

The Challenge: Young people living in isolated rural and mountainous areas face high barriers to democratic participation and a lack of youth infrastructures.

The Core Idea: Transforming passive travel time on public transport into active, productive civic laboratories.

The Goal: To overcome geographical isolation, break local routines, and bring youth work directly to where young people are.

Outward Journey (Preparation): Traveling together becomes a creative lab to introduce active citizenship topics.

On-Site (The Encounter): Targeted visits to social projects, rural startups, or local institutions.

Return Journey (Debriefing): Structured reflection on the way back to process and internalize the experience.
